IN THE CLAIMS

Claims 1-15. (Cancelled)

16. (Currently amended) A method for conducting a transaction using a cashier-side unit and a customer-response unit, the customer-response unit including a communications link, the method comprising:

receiving, via the communications link of the customer-response unit, content for presentation at the customer-response unit during the transaction, wherein the content is unrelated to data essential for completion of the transaction;

displaying the content on a display of the customer response unit, wherein the display includes an indication that a customer can respond to the content;

collecting information including one of a customer response to the content and a non-response to the content, wherein the one of the response and the non-response is transmitted to an advertisement server in order to collect information about the customer;

communicating a monetary amount of the transaction from the cashier-side unit to the customer-response unit;

receiving customer input at the customer-response unit; and
transmitting the customer input and the monetary amount to a remote service provider for
authorization.

- 17. (Previously presented) A method according to claim 16, further comprising: entering the monetary amount of the transaction into the cashier-side unit.
- 18. (Previously presented) A method according to claim 16, further comprising: receiving authorization from the remote service provider for the transaction.
- 19. (Previously presented) A method according to claim 16, further comprising: generating a record of the transaction and transmitting the record to an electronic receipts

service.

- 20. (Previously presented) A method according to claim 16, wherein the content for presentation comprises an advertisement, coupon or award.
- 21. (Previously presented) A method according to claim 16, wherein the customer input comprises an electronic signature.
- 22. (Previously presented) A method according to claim 16, wherein the customer input comprises a personal identification number (PIN).
- 23. (Previously presented) A method according to claim 16, wherein the customer input comprises a biometric data.
- 24. (Previously presented) A method according to claim 16, further comprising: presenting the content at the customer response unit.
- 25. (Previously presented) A method according to claim 16, wherein the cashier-side unit does not receive the content for presentation at the customer response unit.
- 26. (Currently amended) A system for conducting a transaction, comprising:

a customer-response unit coupled to the cashier-side unit, the customer-response unit comprising:

an interface to a content-provider for receiving content for presentation, wherein the content is unrelated to data essential for completion of the transaction; [[and]]

a display for presenting the content, wherein the display includes an indication that a customer can respond to the content; and

a customer interface for receiving <u>and recording</u> customer input, <u>customer</u> responses and customer <u>non-responses</u> to the content, <u>wherein the responses and the non-</u>

responses are transmitted to an advertisement server in order to collect information about the customer; and

the cashier-side unit comprising:

a cashier interface for entering a monetary amount of the transaction; and an authentication interface for transmitting the customer input and the monetary amount to an authentication server; and

an electronics receipts service for storing a record of the transaction.

27. (Cancelled)

- 28. (Previously presented) A system according to claim 26, wherein the content for presentation comprises an advertisement, coupon, or award.
- 29. (Previously presented) A system according to claim 26, wherein the customer input comprises a signature.
- 30. (Previously presented) A system according to claim 26, wherein the customer input comprises a personal identification number (PIN).
- 31. (Previously presented) A system according to claim 26, wherein the customer input comprises a biometric data.
- 32. (Currently amended) A computer program product for conducting a transaction using a cashier-side unit and a customer-response unit, the customer-response unit including a communications link, the computer program product comprising a computer readable medium encoded with a program module, the program module including instructions for:

receiving, via the communications link of the customer-response unit, content for presentation at the customer-response unit during the transaction, wherein the content is unrelated to data essential for completion of the transaction;

displaying the content on a display of the customer response unit, wherein the display includes an indication that a customer can respond to the content;

receiving <u>and recording</u> customer responses <u>and customer non-responses</u> to the content, <u>wherein the responses and the non-responses are transmitted to an advertisement server in order to collect information about the customer;</u>

receiving a monetary amount of the transaction from the cashier-side unit; receiving customer input at the customer-response unit; and

transmitting the customer input and the monetary amount to a remote service provider for authorization.
